

## Is alsym energy flammable?

Alsym(TM) Energy has developed a high-performance, inherently non-flammable, non-toxic, non-lithium battery chemistry. It's a low-cost solution that supports a wide range of discharge durations.

## What makes alsym a good battery company?

Our team and partners are striving to make battery production simple, affordable, and sustainable for the long term. Mukesh Chatter is the President, CEO and co-founder of Alsym Energy, a battery technology company developing high-performance, low-cost batteries to enable a zero-carbon electrified future for all.

## What is alsym battery?

By using readily available, inherently non-toxic and non-flammable battery materials, Alsym is working to deliver wide-duration storage with performance comparable to lithium ion at a much lower cost, helping to speed the pace of decarbonization globally. The company is based in Woburn, Massachusetts.

## What is alsym green battery chemistry?

Alsym Green's metal-oxide battery chemistry leverages a mechanism analogous to the one found in lithium-ion batteries, with the working ion shuttling between the anode and cathode. Alsym Green cells are also designed similarly to lithium-ion, with a cathode, anode, separator, and liquid electrolyte.

Could alsym be a new energy storage platform?

A new platform for energy storage Although the batteries don't quite reach the energy density of lithium-ion batteries, Varanasi says Alsym is first among alternative chemistries at the system-level. He says 20-foot containers of Alsym's batteries can provide 1.7 megawatt hours of electricity.

Where are alsym batteries made?

Alsym has been manufacturing prototypes at a small facility in Woburn, Massachusetts for the last two years. Pictured is a view of the Alsym facility. Lithium-ion batteries are the workhorses of home electronics and are powering an electric revolution in transportation. But they are not suitable for every application.

Mining operations demand energy storage solutions that can withstand harsh conditions while delivering continuous, reliable power. With 2x to 10x the energy density of competing non-lithium technologies, Alsym Green is capable of storing up to 1.7 MWh of energy in a 20-foot BESS container and discharge for 2 to 110 hours, making it ideal for mining applications that require ...

[illegible]

Alsym Energy, a Boston-based startup that has developed an innovative lithium and cobalt-free battery, has reportedly drawn \$78 million during the company's series C funding, led by the company ...

# Alsym batteries Czechia

He says 20-foot containers of Alsym's batteries can provide 1.7 megawatt hours of electricity. The batteries can also fast-charge over four hours and can be configured to discharge over anywhere from two to 110 hours. "We're highly configurable, and that's important because depending on where you are, you can sometimes run on two cycles ...

Alsym Energy has 55 total employees. What industry is Alsym Energy in? Alsym Energy's primary industry is Electrical Equipment. Is Alsym Energy a private or public company? Alsym Energy is a Private company. What is Alsym Energy's current revenue? The current revenue for Alsym Energy is . How much funding has Alsym Energy raised over time?

The company's batteries are also less sensitive to raw material shortages and price volatility due to their use of low-cost materials with robust supply chains. To accelerate the development of these affordable battery ...

Alsym batteries can even be used on off-shore wind farms, oil and gas platforms, and drilling rigs. Request a Spec Sheet. A non-flammable solution for port electrification. Trains, trucks, and cranes burning diesel and coal are significant contributors to air pollution, and ports are taking steps to reduce their environmental impact. As port ...

We know about lithium-ion batteries and their flammability risks. Over the last two years we've seen incidents including electric vehicles spontaneously combusting to energy storage systems burning for days on end. But here at Alsym we've been noticing another particular situation where lithium-ion batteries are causing problems: landfills.

Alsym Green is the highest-performing non-lithium battery for BESS. Its performance profile offers energy density that is 2x to 10x higher than competing technologies, stores up to 1.7 MWh of energy in a 20' BESS container, provides fast charge (4 hours) and flexible discharge (2 to 110 hours), and 92% round-trip efficiency.

As the use of lithium-ion batteries grows, so does the immense fear surrounding their ability to catch fire and release toxic chemicals, especially in areas with high population density. Lithium-Ion Battery Fires and Fears. Lithium-ion batteries are notorious for containing highly flammable and toxic materials.

Alsym Green is the highest-performing non-lithium battery for stationary storage. It offers energy density that is 2x to 10x higher than competing technologies, stores up to 1.7 MWh of energy in a 20' BESS container, provides fast charge (4 hours) and flexible discharge (2 to 110 hours), and has 92% round-trip efficiency.

By using readily available, inherently non-toxic and non-flammable battery materials, Alsym is working to deliver wide-duration storage with performance comparable to lithium ion at a much lower cost, helping to ...

Battery technology in data centers is undergoing a transformative evolution, propelled by advancements aimed

at enhancing reliability, efficiency, and sustainability. Traditional lead-acid batteries, while prevalent for back-up power, are gradually making room for more innovative solutions like lithium-ion batteries that are higher performing ...

Low-cost, high-performance Alsym batteries can help OEMs position electric two and three-wheelers at price points competitive with ICE models, speeding adoption across both consumer and commercial segments. They can replace lead-acid, NiMH and lithium-ion batteries in many applications and combine performance and safety at price points that ...

Batteries in most smartphones and other consumer electronics use a formulation that calls for a majority cobalt oxide cathode (LCO). ... Fortunately, there are a number of companies (including Alsym Energy) working toward that goal with technologies including sodium-ion, nickel-zinc, and more that are safer for people and safer for the ...

Alsym batteries at the grid-level offer the best mix of energy density, safety, efficiency, and discharge duration capability among non-lithium options on the market today. Alsym's first product, Alsym Green, is targeting ...

Mukesh Chatter is the President, CEO and co-founder of Alsym Energy, a battery technology company developing high-performance, low-cost batteries to enable a zero-carbon electrified future for all. He is a successful serial entrepreneur with a track record of developing advanced technology products and leading startups from launch to success.

Second Use, Battery End of Life, Disposal, or Recycling: Batteries must be properly disposed of (or recycled safely) to prevent environmental contamination and reduce the risk of accidents. NFPA 800 should describe standards for the safe disposal and recycling of batteries, including guidelines for the handling of hazardous materials.

Aqueous Metal Oxide Batteries. Alsym aqueous batteries are a non-toxic alternative to lithium-ion that completely avoids lithium and cobalt and uses water as the primary solvent in the electrolyte and in the manufacturing of the electrodes. Using readily available, inherently non-flammable materials including manganese and other metal oxides ...

The company's batteries are also less sensitive to raw material shortages and price volatility due to their use of low-cost materials with robust supply chains. To accelerate the development of these affordable battery systems, Alsym is partnering with a leading India-based automaker in a joint effort to develop Alsym's batteries for EVs.

One notable example is the impact of the American Battery Materials Initiative, announced by President Biden in October 2022, which allocates \$2.8 billion in Department of Energy grants to support the development of a strong battery materials supply chain in the US. Twenty manufacturing and processing companies that supply materials essential ...

Last week Bloomberg NEF released their 2022 battery pricing update, and the news confirmed what everyone already knew-for the first time ever, lithium-ion battery prices went up instead of down. Here's are some of the highlights: Volume-weighted average prices for lithium-ion battery packs across all sectors have increased 7% from last year in real terms to \$151 / ...

Forthcoming next-gen battery technologies will revolutionize BESS technology and battery storage overall with lower manufacturing costs, better safety, and non-toxicity. At Alsym, our team of battery storage veterans and innovators has been hard at work developing the next generation of battery storage technology for over eight years.
