The loan will provide funds to build a 60 MW solar power plant and supply and install solar panels to reduce carbon emissions by 60,000 tons a year in the energy sector. The project will also serve to generate socio-economic growth, improve the electrical network's reliability, and help Belize transition to clean energy.

The system would source power from the Solar System but would use electricity from BEL's grid if needed. Instead of having a system which has a generator as a backup supply, BEL's grid would serve as the backup power supply. In other countries, the excess power that your solar panel system would produce could be sold
