

The percentage of a battery that can be safely drained of energy without damaging the battery is the battery's depth of discharge. Electric vehicles normally use up to 85 percent of a lithium battery's total capacity in a single cycle. By comparison, traditional lead acid batteries should not be discharged past 50 percent.

BASF Stationary Energy Storage GmbH, a wholly owned subsidiary of BASF, and NGK INSULATORS, LTD., a Japanese ceramics manufacturer, have released an advanced container-type NAS battery (sodium-sulfur battery) *1. The new product NAS MODEL L24 has been jointly developed by NGK and BASF and is characterised by a significantly lower ...

The large-capacity battery at Vítkovice will operate in conjunction with the conventional unit, which is a major regional energy supplier. Its customers include T?inecké ?elezárny, Vítkovice Holding, Vítkovice Hospital ...

NGK SPARK PLUG's EMEA sales represent 27% of this global turnover. NGK SPARK PLUG operates on all continents and has 43 group companies, 33 production plants and five Technical Centres. Aftermarket EMEA: NGK SPARK PLUG has seen significant growth across the Aftermarket since expanding beyond motorcycle parts into the automotive sector in the ...
