Why is Yemen a good place for solar energy?

Yemen has one of the highest levels of solar radiation in the world, increased solar irradiation availability throughout the year. Yemen has a long coastline and high altitudes of 3677 m above sea level, making it an ideal location for wind energy generation, with an estimated 4.1 h of full-load wind per day.

How is Yemen dealing with energy problems?

Yemen is dealing with the dilemma of energy networks that are unstable and indefensible. Due to the fighting, certain energy systems have been completely damaged, while others have been partially devastated, resulting in a drop in generation capacity and even fuel delivery challenges from power generation plants.

What is the main energy source in Yemen?

According to the International Energy Agency, in 2000, oil made up 98.4% of the total primary energy supply in Yemen with the remainder comprising biofuels and waste (International Energy Agency). Natural gas and coal were introduced into the energy mix around 2008, and wind and solar energies were added around 2015.

What is the energy mix in Yemen?

However, Yemen's current energy mix is dominated by fossil fuels (about 99.91%), with renewable energy accounting for only about 0.009%. The national renewable energy and energy efficiency strategy, on the other hand, sets goals, including a 15% increase in renewable energy contribution to the power sector by 2025 (Fig. 11).

In Yemen, less than half of the population has access to electricity. In 2010, the government launched a National Strategy for renewable energy and energy efficiency, which aims to develop grid and off-grid renewable energy and targets a 15% share of renewable energy.

Yemen started its TNA process in 2020 as part of the TNA IV project, and is currently working on their Barrier Analysis and Enabling Framework report.
