

Is Finland a nuclear power-friendly country?

The Finnish public is among the most nuclear power-friendly nations in the EU: in a 2008 survey, the production of nuclear electricity was supported by 61%, clearly above the EU average of 44%. Finnish energy industry association Finnish Energy has followed the public opinion yearly on their part.

What is the future of nuclear energy in Finland?

Nuclear amounted to 33% of total electricity generation in 2021, and this figure is expected to rise to more than 40% with the planned start of commercial operations at the Olkiluoto 3 reactor in 2023- the first new nuclear plant in Europe in 15 years. Finland is also a global leader in nuclear waste management and disposal.

How many power plants are there in Finland?

We have 18 power plants in which we generate over 20 per cent of all the electricity produced in Finland, as well as process steam for industries and district heat for communities. Thanks to hydropower, biopower and nuclear power, the electricity we generate is almost carbon-neutral. We are determined to achieve the same goal in heat production.

How does Finland generate electricity?

We generate energy with reliable and adjustable hydroelectric, thermal and nuclear power. We have 18 power plants in which we generate over 20 per cent of all the electricity produced in Finland, as well as process steam for industries and district heat for communities.

Does Finland have a high energy consumption?

At the same time, Finland still has a high level of energy consumption in relation to the size of its economy, showing the opportunity for energy efficiency to help improve energy security and reduce emissions in sectors such as transport and industry."

Why do we enforce Finnish and European energy and climate policies?

We enforce Finnish and European energy and climate policies. Our goal is to promote cost efficient achievement of climate goals and efficient operation of the energy market.
