What type of energy is used in Greece?

Energy in Greece is dominated by fossil gas and oil. Electricity generation is dominated by the one third state owned Public Power Corporation (known mostly by its acronym DEI, or in English DEI). In 2009 DEI supplied for 85.6% of all electric energy demand in Greece, while the number fell to 77.3% in 2010.

Will Greece become a net exporter of energy?

There are multiple high profile electricity interconnector projects in discussion, with two aiming to connect Greece with Egypt for the purpose of exporting renewable energy into Greece and beyond. As Greece further develops these projects, it positions itself to become a net exporter of energy in the region.

How did Greece's grid infrastructure lose value after the financial crisis?

Following the financial crisis, Greece's grid infrastructure lost value in what can be classified as a disinvestment of 150 million Euros a year when there should have been an investment of about 300 to 400 million Euros a year. Greece's target to shift from lignite towards renewable energy sources further propel such efforts.

How is wind energy regulated in Greece?

There is a quite long licensing process. Greece's wind energy capacity in MW per year. x-axis is the year and y-axis is the capacity in Megawatt. Solar power in Greece has been driven by a combination of government incentives and equipment cost reductions.

Does Greece rely on lignite?

As of the 2023 International Energy Agency (IEA) report, Greece has made notable strides in reducing its reliance on lignite for electricity generation. The report highlights a decrease in lignite usage from 60% in 2005 to 10% by 2021.
