

How can Haiti improve energy resilience?

In the face of these obstacles, Haiti is forging a path toward energy resilience with support from USAID and the National Renewable Energy Laboratory (NREL). Central to this effort is the development of energy modeling frameworks and trainings, microgrids, agrivoltaics, and off-grid solar power to enhance energy resilience and security in Haiti.

What kind of energy does Haiti use?

This page is part of Global Energy Monitor's Latin America Energy Portal. Haiti relies on a mix of imported oil and domestic biofuels such as wood and sugar cane for its total energy supply. As of 2020, more than 90% of electrical generation in Haiti was derived from fossil fuels and less than 10% from renewables.

Why is electricity so expensive in Haiti?

This leaves the country vulnerable to global oil price fluctuations, which directly impact the cost of electricity. Haiti also faces challenges in terms of lack of grid access, reliability of electricity service, and the prevalence of wood and charcoal fuels for home energy consumption.

Can solar energy be used effectively in Haiti?

Solar energy can be used effectively in Haiti, offering energy self-sufficiency to the most isolated cities in the absence of a power grid. The country's location in the tropics gives it very strong solar energy potential. It is believed that solar energy will play a fundamental role in access to electricity over the next 10 to 15 years.

How many people in Haiti have electricity?

About 49% of the population of Haiti had access to electricity as of 2022. In rural areas, that number is closer to 2%, and while 80% of Haiti's urban areas have access to electricity, that access may not be reliable. "Even when a household is connected to the power grid, they might only have power for three to eight hours a day."

How does oil affect electricity in Haiti?

Like many island nations, Haiti is highly dependent on imported fossil fuels for electric generation--roughly 85% of its electricity is produced from the combustion of petroleum-based fuels. This leaves the country vulnerable to global oil price fluctuations, which directly impact the cost of electricity.

Australian oil and gas firm Titan Energy has commenced commercial production at the initial test well of at Allen Dome oilfield in Brazoria County, Texas, US. JT Reese #14 well is presently producing 100% high gravity (44-47°) oil at 80psi on a 16/64 choke.
