

Home assistant enphase dashboard Papua New Guinea

Which Enphase sensor works with energy dashboard?

For 'Solar Production', the `today_s_ENERGY_production` sensor is the ONLY enphase sensor that will work with energy dashboard by default without modifying home assistant and creating extra power and energy sensors. This is due to the `state_class: total_increasing` attribute that ONLY this sensor appears to have.

How do I connect Enphase envoy to home assistant?

The Envoy must be on your local network with IPV4 connectivity from Home Assistant. Envoy firmware version 3.9 or newer. an Enlighten cloud username and password. Home Assistant 2023.9 or newer. To add the Enphase Envoy integration to your Home Assistant instance, use this My button: Enphase Envoy can be auto-discovered by Home Assistant.

Does Enphase support home assistant?

While Enphase doesn't officially support Home Assistant, there is a great integration built into the core that is relatively well maintained. Over the following sections, we will walk you through the process of connecting your Enphase power system to Home Assistant. We will also show you how to add Enphase to the Home Assistant energy dashboard.

Does Enphase integrate with a DIY account?

Note This integration does not provide the additional data accessible by Enphase Installer or DIY accounts, only data accessible by Home owner accounts is provided. Using an Installer or DIY account may or may not work, but currently just the Home owner data is retrieved. Specify the Envoy serial number.

Does Enphase push new firmware to IQ gateway / envoy?

Enphase does push new firmware to the IQ Gateway / Envoy, 'not necessarily letting the home owner know'. In the past this has broken this integration as API details and change information is limited available.

Can home assistant use Enphase battery charge & discharge power?

Our two helpers now give Home Assistant the Enphase battery charge and discharge power. However, to be usable within the Energy Dashboard, we must convert these values from power to energy. Energy is essentially a way of expressing your power over a period of time.

I suspect that Enphase only samples every 5 minutes back to My Enlighten (sometimes with a really long lag too), where as home assistant samples every 1 minute. That being said, the energy dashboard is also 1 - 2 hours behind as well so lag is a problem for both dashboards. At least the home assistant sensors are rapidly recording every minute.

Installation et configuration pas à pas de la solution domotique Home Assistant (version 2023-8-4) pour

présenter les données de consommation énergétique et ...

I suspect that Enphase only samples every 5 minutes back to My Enlighten (sometimes with a really long lag too), where as home assistant samples every 1 minute. That being said, the energy dashboard is also 1 - 2 ...

@del13r I'm just getting back to supporting the Envoy sensor and have noticed from reading posts (including yours) that Home Assistant needs a third sensor for the Return to Grid value. I'm thinking of adding a sensor that ...

I'm trying to configure the Energy dashboard using my Enphase integration. I found a list of which entities to use for consumption, return to grid, etc. here. But the entities it mentions are missing from the drop down. I don't ...

There are a lot of threads, with a LOT of information... but no tutorial of current best practices that collects any of it into a single place. My first step is just to get all the necessary sensors into ...

Hi, I've been using the Enphase Envoy (DEV) custom component from HACS for quite some time. I am delighted to see this integration is back in core in 2023.9.0. How do I disable the custom integration, and am I at any risk of losing sensors or long-term statistics if I do so? The energy dashboard is my most important HA use case.

I have just gotten an Enphase Battery 5P and System controller 3 and the Enphase Envoy integration is great, I've been able to do a lot. However I have not been able to configure the Energy dashboard for the battery following the instructions * Energy dashboard. I found some comment (somewhere) that since I don't have a combiner there are not battery ...

@DHoefakker I don't think it is possible to calculate grid value directly. If the Envoy is configured with Consumption CTs, putting in the Production and Consumption sensors into the Energy Dashboard will show you any return to the Grid.

I maintain the Enphase Envoy sensor code in Home Assistant (or atleast try to been bust the last few months) just getting back to it now and trying to get the Return to Grid values to correctly appear in Home Assistant. ... This combining of the data is what makes it a inaccurate source for home assistant energy dashboard. Once we subtract ...

The Enphase Envoy updates every 60 seconds. I also have a pulse counter called PowerPal but once solar starts producing, then I dont see anything in the day so I prefer to get data every 60 seconds 24 hours a day ...

When Enphase stopped working a while ago I resolved to a HACS integration. Enphase (DEV). That resulted in two sets of solar panel data. The sensor data from the original integration is still there and I use it to get an

estimate over a longer period. (monthly, yearly, etc.) Now the original Enphase is fixed I want to return to that integration without losing my sensor ...

Bonjour à tous Je tente depuis quelques jours à monitorer pour mon Dashboard (hors celui énergie) différents éléments de ma consommation, production d"énergie. Je tourne en rond sur le calcul de mon autoconsommation qui est pas si mal mais qui semble dériver dans le temps en ma large défaveur ! J'ai créé des templates de la sorte : ...

Enphase model offering differs in various countries as does firmware versions and releases. Not all firmware is released in all countries and as a result firmware versions may differ largely in time. Enphase does push new firmware to the IQ ...

This is a HACS custom integration for enphase envoys with firmware version 7 and up. Especially made to provide extra functionality with your installer or DIY account. You can also use the integration with a Home Owner account, ...

When I go to the initial screen of the Energy dashboard, it has a series of prompts...and it has the sensors from my enphase system, but they are cumulative sensors: should I choose one of these (today, 7 day, lifetime...

Same, but with enPhase. Only lifetime production is shown in the list, but I think the new statistics display handles this itself. I configured my dashboard last night and this morning it's showing kwh production on the graph, by the hour. I.e. the difference in the lifetime figure over time.

<p>Enphase has talked about being the Apple of solar in the past, but they didn't learn from Apple on integration. Even Apple, Google, and Amazon have decided to just support a single standard (Matter), rather than each fighting for their own walled gardens of automation. Enphase will do far worse than any of those 3 for automation. Nobody wants yet another app and standard to try ...

Energy Dashboard updates once every hour. Enphase enlighten cloud updates every 15 mins. Your sensors in home assistant update every minute if using the native enphase integration. I use the sensors to create ...

Hi Angus, I like what you did with custom:apexcharts-card I made a few tweaks to get the colors to match. Here is Enhphase Enlighten [image] Here is my custom:apexcharts-card with 15 min duration Here is my custom:apexcharts-card with 5 min duration Here is my custom:apexcharts-card with 1 min duration I prefer the look of 5 min duration Note: I only just ...

@del13r I'm just getting back to supporting the Envoy sensor and have noticed from reading posts (including yours) that Home Assistant needs a third sensor for the Return to Grid value. I'm thinking of adding a sensor that would be the subtraction of the Lifetime Consumption and Lifetime Production values. I don't have an Envoy with Consumption CTs ...

Home assistant enphase dashboard Papua New Guinea

Home Assistant Energy Dashboard with Enphase Envoy and Emporia Vue. I don't have CTs installed, so my Enphase app just shows solar production. I posted this post and it got a fair bit of attention asking for writeups, so here's my attempt ...

Update 21/July/2023 - I have started a new topic that uses a fully manual solution I came up with using just the rest sensor for Enphase Envoy on D7 firmware. It's a lengthy guide with lots of explanation. Hopefully it...

@vk2him Thanks - I reviewed (and played) with your code. Big thanks! My issue is not in accessing the values but in making sense out of them. As an example a Power Factor is a ratio between Real Power (p) and Apparent Power (s). The stream contains all three properties(pf, p, s) (and for each of the phases and for "production", "net-consumption" and ...

Hi Everyone, I like to introduce you to HaCasa, a modern but simple UI for your Home Assistant Dashboard. HaCasa is somewhat a adaptation of @fredrikpersson92 MiniHass MKII. After seeing his work, I wanted to create something that fits my needs and style, so together we created HaCasa. I have to be honest, it's been about 5 months since I did something with ...
