

How can Iran achieve long-term electricity targets?

We can conclude that Iran's electricity capacity is high and this can help to increase the share of wind energy in the total primary supply of energy. To achieve long-term electricity targets, it is necessary to provide incentives to private investors and to put in place clear and stable policies.

Will Iran increase its power plant capacity in 2021?

Iran has in place legislation obliging the Minister of Energy to increase the share of renewables and clean power plants to at least 5% of the country's capacity until the end of 2021.

What percentage of Iran's electricity needs will be generated by renewables?

The Iranian Power Generation, Transmission, Distribution and Management Company (Tavanir) now estimates that renewables will generate around 10 percent of Iran's electricity production requirements within five years.

What are Iran's Energy Priorities?

For example, based on various indicators, Manzoor and Rahimi showed that Iran's priorities for construction and investment in electricity generation and power plants in the future include, in order, wind energy, hydropower, photovoltaic energy, combined-cycle power plants, nuclear power plants and thermal power plants. 4.

What is Iran's energy mix?

Iran's energy mix is dominated by hydrocarbons. Natural gas and petroleum derivatives such as gasoline and fuel oil power traditional thermal power plants that satisfy around 98 percent of Iran's total energy demand. The remaining two percent comes from a combination of hydropower, nuclear, biofuels and other renewable sources.

Can Iran's future be planned based on recognized and predictable electricity costs?

The future of Iran's economy can be planned based on recognized and predictable electricity costs because that electricity comes from indigenous energy and is free from all the security, political, economic and environmental problems associated with oil and gas.

Solar energy is a potential clean renewable energy source. Solar power generation demand increases worldwide as countries strive to reach goals for emission reduction and renewable power generations [1]. Solar energy can be exploited through the solar thermal and solar photovoltaic (PV) routes for various applications [2] 2005, global solar markets ...

Subsidies for energy products were obtained from the Energy Balance sheets for 2017 (Iran's Energy Balance, 2017). Pollutants emissions were obtained from Farajzadeh (2018). Another piece of data applied to build the modified SAM is the exchange rate to calculate subsidies based on the price gap approach (Central Bank of
