

Iran brightnight power

Why is Iran implementing power blackouts?

Iran has started implementing rolling power blackouts across the country as the Islamic republic struggles with a shortage of natural gas ahead of winter. Two-hour daily outages will be enforced in Tehran, the capital city that is home to 9.5mn people, from Monday and will affect homes and businesses, local media reported.

Why do Iran's power plants rely on mazut?

"This is a valuable step towards reducing the health risks associated with air pollution." As temperatures drop in winter, Iran's supply of natural gas is insufficient to meet surging demand, so its power plants are forced to rely on mazut as feedstock.

Where is Iran's nuclear power plant located?

The reactor building of Iran's nuclear power plant and electricity poles are seen, at Bushehr, Iran, 750 miles (1,245 kilometers) south of the capital Tehran, Iran, Feb. 27, 2005. (AP Photo/Vahid Salemi, File)

Are power outages happening in Iran?

Power outages have come and gone in the past in Iran, which struggles with aging equipment at many of its plants. Over the summer, sustained blackouts struck industrial parks near Tehran and other cities. Then in October and November, rolling power cuts across Tehran's neighborhoods became the norm in daylight hours.

Why did Iran stop burning mazut?

Climate change has been blamed in part, with persisting droughts and less water running through Iranian hydroelectric dams. Iran's reformist President Masoud Pezeshkian ordered several power plants to stop burning mazut, a high-polluting heavy fuel common in the former Soviet Union countries.

How will the power cuts affect Tehran?

Two-hour daily outages will be enforced in Tehran, the capital city that is home to 9.5mn people, from Monday and will affect homes and businesses, local media reported. Several provinces were also hit by the power cuts on Sunday.

BrightNight is the first renewable power company designed to provide utility and commercial and industrial customers with clean, dispatchable renewable energy solutions needed to successfully decarbonize. BrightNight works with customers across the U.S. and Asia Pacific to design, develop, and operate safe, reliable, large-scale, hybrid ...
