Greece: Energy intensity: how much energy does it use per unit of GDP? Click to open interactive version.

Energy is a large contributor to CO₂ - the burning of fossil fuels accounts for around three-quarters of global greenhouse gas emissions. So, reducing energy consumption can inevitably help to reduce emissions.

Greece is making progress on its energy transition, including implementing reforms to standardise and simplify licensing procedures for renewable projects and investigating options for offshore wind. Coal fired generation, once the main source of electricity, will be phased out by 2028 at the latest and EUR 5 billion has been committed to ...
