Should solar PV be deployed in Kiribati?

The findings of this roadmap show that power sector is a key area, where the ongoing efforts from the deployment of solar PV should be continued and complemented with an improvement of efficiency in Kiribati's entire energy system, including electricity use, heating, cooling, and transport.

What is the Kiribati energy roadmap?

The KIER is Kiribati's comprehensive energy roadmap, which takes into account renewable energy and energy efficiency potential in all sectors from 2017 to 2025.

Does Kiribati need electricity?

As a small, remote island state, Kiribati is highly dependent on imported energy supply. Electricity is one of the government's largest expenditures. Yet the current fossil fuel-based power system is inadequate to meet future demand.

Does Kiribati have biomass?

Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important source in lower-income settings. Kiribati: How much of the country's electricity comes from nuclear power? Nuclear power - alongside renewables - is a low-carbon source of electricity.

Kiribati's energy story highlights both the successes and pitfalls of off-grid solar projects in the South Pacific, a region that includes some of the world's poorest countries. On one hand, energy experts say such initiatives have brought power to thousands of remote villages despite enormous geographic and logistical obstacles.

The hybrid power generation concept is initiated to incorporate green energy generation in the power sector. Among these photovoltaic with wind energy is the most predictable. The tourism industry, domestic and other industries' requirement of warm water would be met using solar water heaters that could substantially reduce the energy demand.

The deployment of a land-based Ocean Thermal Energy Conversion (OTEC) plant in South Tarawa, Kiribati, Pacific Islands Region, in 2020/2021, represents a major technical achievement, alongside an international development opportunity. Pacific Small Island Developing States (PSIDS) are archipelago nations with small land areas and large oceanic exclusive ...
