How much does LCoS cost?

Analysis findings indicate that in the top 10% of highest impact scenarios, the LCOS ranged from \$0.150-\$0.170/kWh with a mean portfolio cost of \$491 million for above ground storage and \$0.113-\$0.116/kWh with a mean portfolio cost of \$400 million for below ground storage.

Can LCoS be discounted?

There is a small subset of portfolios that achieve deeply discounted LCOS levels without requiring investment in some of the higher cost innovations, such as demonstration projects and technologies for subsurface evaluation of porous rock for storage.

Are LCoS targets feasible for multiple technologies?

Through combinations of innovations, or portfolios, the 2030 levelized cost of storage (LCOS) targets for LDES are feasible or nearly feasible for multiple technologies. For a detailed analytical breakdown of innovation portfolios for each LDES technology, see the Technology Strategy Assessments.
