

How can we improve electricity in Lebanon?

Electricity in Lebanon is highly subsidised. Therefore, increasing tariffs and reducing electricity subsidies may encourage public and private investments in renewable energy projects and allow for the proliferation of renewables through small- and medium-scale deployment. Reinforce the grid and conduct grid impact assessments

Can Lebanon generate 30 percent of its electricity from renewable sources?

Lebanon has the potential to generate up to 30 per cent of its electricity from renewable sources by 2030, according to a new report published by the International Renewable Energy Agency (IRENA).

How does energy affect Lebanon's economy?

Energy and electricity demand have weighed heavily on Lebanon's economy. Imported fuel oil accounts for nearly a quarter of the national budget deficit, while electricity demand outpaces power generation capacity. Renewable energy technologies, in contrast, offer the prospect of clean, fully domestically sourced power and heat systems.
