

How will Liberia achieve universal access to electricity by 2030?

The country will need to invest heavily in energy infrastructure to achieve universal access to electricity by 2030. The primary energy sources in Liberia are traditional biomass fuels such as firewood and charcoal, which account for more than 80 % of the country's total energy consumption [5,12,13].

What are the opportunities for energy access in Liberia?

Additionally, adopting off-grid and mini-grid solutions presents another opportunity for energy access in Liberia. Given the challenges of extending the central grid to remote areas, off-grid and mini-grid systems offer cost-effective alternatives. Some of the energy sources utilized in Liberia are summarized in Table 3.

What energy sources does Liberia use?

Liberia also utilizes other energy sources on a smaller scale. These include small-scale renewable energy systems such as solar and biomass. However, the contribution of these sources to the overall energy mix in Liberia is limited. Abundant and clean energy sources, reducing reliance on fossil fuels.

How can Liberia improve its energy mix?

Overcoming these challenges requires strategic energy mix diversification through increased utilization of indigenous renewable resources such as solar and biomass energy. These resources hold immense potential, with Liberia boasting abundant solar irradiation and promising bioenergy in specific regions.

Does Liberia have a good energy situation?

Efforts have been made in recent years to improve Liberia's energy situation. Yet, significant challenges, including financial constraints, inadequate infrastructure, affordability issues, and an outdated energy policy, continue to hinder progress.

What are the challenges to energy access in Liberia?

The primary challenge to energy access in Liberia is the limited and underdeveloped energy infrastructure. The lack of adequate power generation, transmission, and distribution systems contributes to this low access rate. The electrification rate is significantly lower in rural areas, where most of the population resides.

The first comprehensive solar and hydro maps of Liberia were developed to, together with the comprehensive Geographic Information System (GIS) database developed in collaboration with the Liberia Institute for Statistics and Geo-Information Services (LISGIS), apply the least cost geo-spatial "Network Planner" methodology to Liberia.
