

What are Mexico's energy transition goals?

1. Introduction Following the Energy Reform of 2013 and the Energy Transition Law of 2015, Mexico set a national strategy for the decarbonisation of the electricity sector and established three clean energy transition goals: 35% of the total electricity production must come from clean energy by 2024; 37.7% by 2030; and 50% by 2050 . 1

Why are energy policy debates in Mexico so unresolved?

To a large extent, this inability is the direct result of an old commitment to resource nationalism, which has affected the entire energy sector, including electricity, as well as an unresolved vacillation between market liberalization and resource nationalism that has characterized the energy policy debates in Mexico for the last 80 years.

Is Mexico falling behind on energy development?

Mexico is falling behind on this score, and it must create a strategy to couple its power development with U.S. policies. In sum, embracing technology-driven solutions and fostering an enabling regulatory environment will be critical for navigating the evolving energy landscape and unlocking the full potential of renewable energy in Mexico.

How can Mexico promote energy storage?

To accelerate investments and promote the formation of a storage market, Mexico should introduce technology-push and market-pull policies simultaneously. Procurement targets could be used if policymakers decided that energy storage is a short-term priority, as in the case of the US.

Can Mexico increase energy independence?

As noted in previous work from the Center for U.S. and Mexico, Mexico's potential for increasing energy independence, reducing emissions, and generating employment is significant.

Will Mexico start energy storage RD&D projects?

The roadmap suggests developing regulations and promoting research, development and demonstration (RD&D) projects, but these proposals have not yet been adopted as a formal policy guideline. Nevertheless, Mexico is expected to start energy storage RD&D projects in the next years.

This report provides an assessment of Mexico's clean energy resource potential and pathways for rapidly deploying renewable energy technologies to enable Mexico to reach its goal of 35% ...
