Using the Solar Battery Bank Size Calculator, we can calculate the required solar battery bank size: Solar Battery Bank Size = $(20 \text{ kWh} * 2 \text{ days} * 1000) / (48\text{V} * 90\% * 70\%) / (20 \text{ kWh} / 5 \text{ days} / 18\%) / 95\%$. After evaluating the formula, the calculator determines that the required solar battery bank size is 40.35. Illustrative Table Example

Solar charging in storage (400w) keeps things happy with battery switches off, (Big Boy, that we have just had to clean, is not energised, v good) but voltage not high enough to charge the new battery, but driving from the alternator does fine.. early days, but so far we are happy with this.. gen start is immediate..
