

Is Hong Kong backing hydrogen as a green fuel?

Addressing a networking luncheon in the run-up to October's Eco Expo Asia, Hong Kong SAR Secretary for Environment and Ecology Tse Chin-wan said Hong Kong was backing large-scale development of hydrogen as a green fuel, as it can store power generated from renewable sources, such as solar.

How much does green hydrogen cost in Hong Kong?

Estimates of the price of green hydrogen, from a Hong Kong Productivity Council and City University study last September, range between US\$2.50 and US\$6.80 per kilogram. For green hydrogen to become commercially competitive, cost needs to be lowered to less than US\$2 per kg.

Can solar power help Hong Kong grow?

In 2022, Hong Kong's total electricity consumption was approximately 44.7 TWh. The combined physical potential from rooftops and facades exceeds this figure by more than five times, highlighting the critical role solar energy could play in alleviating energy pressure and fostering sustainable growth.

How much solar energy does Hong Kong use?

Hong Kong's roof area, totaling 26.08 km², shows a physical potential of approximately 4.00 × 10¹³ Wh, reflecting the significant solar energy collection capacity. Similarly, building facades, covering about 330.05 km², possess a physical potential of 2.48 × 10¹⁴ Wh. In 2022, Hong Kong's total electricity consumption was approximately 44.7 TWh.

Does Hong Kong need a solar policy framework?

Bridging the large gap between the estimated building solar PV potential and the actual scale of deployment requires the Hong Kong government to design a supportive regulatory and policy framework for solar energy to overcome existing market barriers. No single policy instrument will serve as a silver bullet.

Why do Hong Kong roofs have a higher solar potential?

The solar potential of roofs is substantially higher in the summer and autumn, decreasing notably in spring and winter. This fluctuation is largely due to Hong Kong's low latitude, which results in higher solar altitude angles during the summer and autumn. Consequently, solar radiation strikes the roofs more directly in these seasons.

I graduated from "MSc in Green Technology (Energy)" in 2012. I am now working as an Energy Engineer. My job is related to application of new building technology for green/smart building to save energy/energy harvesting, which I have learnt so much in my study. This program really can help me to develop my career in this field.

The energy storage arm of Chinese solar PV inverter manufacturer Sungrow announced the signing of an agreement earlier this week with renewable energy company MSR-Green Energy (MSR-GE) for the 100MW/400MWh project in Sabah, a state in northern Borneo.

In Hong Kong, with the implementation of the Energy Saving Plan 2015-2025+, the Climate Action Plan 2050 and the Smart City Blueprint launched by the government as well as the government's plan to invest \$240 billion and develop a variety of measures towards climate change mitigation and adaptation, the demand for green energy and smart ...

The Strategy sets out the four major strategies of improving legislations, establishing standards, aligning with the market, and advancing with prudence to create an environment conducive to the development of hydrogen energy in Hong Kong in a prudent and orderly manner, so that Hong Kong would be able to capitalise on the environmental and ...

Hong Kong: Energy intensity: how much energy does it use per unit of GDP? Click to open interactive version. Energy is a large contributor to CO₂ - the burning of fossil fuels accounts for around three-quarters of global greenhouse gas emissions. So, reducing energy consumption can inevitably help to reduce emissions.

Sungrow has announced the signing of an agreement with MSR Green Energy (MSR-GE) to advance a 100MW/400MWh Battery Energy Storage System (BESS) project in Sabah, Malaysia. The project is expected to play a crucial role in the region's transition to renewable energy and sustainable development, with a final installed capacity of 517MWh. ...

Renewable energy developer and corporate development partner · Currently a renewable energy developer attached to MSR Green Energy, a pioneer in the Solar PV industry in Malaysia, exploring every opportunity in the renewable energy areas. Roles involve from project operation, business development, tenders, proposals, office operation and ...
