

What are the challenges faced by Tunisia's electricity sector?

The Tunisian electricity sector faces three main challenges: high dependence on imported fossil fuels, distortive subsidies, and a weak financial performance at utility level. The upscaling of renewables in Tunisia offers the opportunity to meet the growing electricity demand, reduce the energy deficit, and foster economic development.

What is the energy mix in Tunisia?

In terms of the energy mix, fossil fuels dominated (Fig. 4-2), with natural gas accounting for 48%, oil for 41%, while biofuels and waste had in total a share of 10%, and wind and solar held a negligible 0.1% share (IEA, 2020a). The annual average growth rate of energy consumption in Tunisia between 1990 and 2018 was approximately 3%.

How much does electricity cost in Tunisia?

Electric grid In Thala, Tunisia, the cost of purchasing electricity from the grid is measured in euros per kilowatt-hour (EUR/kWh). For households with a monthly consumption ranging from 300 to 500 kWh, the cost per unit of electricity is approximately 0.063 US\$. This price reflects the tariff structure set by the local utility or energy provider.

What is the energy situation in Tunisia?

Overall, the Tunisian energy situation can be divided into three aspects: a large fuel import dependency, high fossil fuels use, and a vast fiscal deficit resulting from high subsidies (Dering et al., 2018).

What limiting Tunisia's energy transition?

At the system level, a number of other elements currently limit Tunisia's progress in the energy transition: subsidised electricity prices that contribute to the national fiscal deficit, energy market structures, hesitant support from institutional actors, and human resources barriers.

What is the energy consumption rate in Tunisia?

The annual average growth rate of energy consumption in Tunisia between 1990 and 2018 was approximately 3%. The generation fleet in Tunisia is composed of a significant number of gas turbines that operate in open cycle to meet the peak demand (Benedetti et al., 2013). Tunisia's installed capacity in 2019 reached 5,653 MW.

Multi-Energy System Operation in Market Environments. Special Issues. First published: 15 April 2024. Last updated: 6 June 2024. Guest Editors: Weiye Zheng, South China University of Technology, Guangzhou, China Jizhong Zhu, South China University of Technology, Guangzhou, China

This article delves into the nuances of renewable energy in Tunisia by examining RETs and identifying the

various barriers hindering their implementation. Interestingly, the outcomes were perfectly in alignment with ...

The multi-energy hybrid power systems using solar energy can be generally grouped in three categories, which are solar-fossil, solar-renewable and solar-nuclear energy hybrid systems. For different kinds of multi-energy hybrid power systems using solar energy, varying research and development degrees have been achieved. To provide a useful ...

Commonly used MEMMG energy management optimization studies are model-based, [12] uses a Mixed Integer Linear Programming (MILP) model to centrally dispatch the MMG of an integrated hydrogen energy system. However, with a high percentage of DERs integrated into MEMGs, the dimensionality of the search space grows exponentially, thus ...

The interdependency between Tunisia's energy and water systems is evident, with water treatment serving as a notable illustration of ... These criteria have proven to be important in decision-making when choosing an optimal energy system. The multi-criteria aspect is considered a major tool when choosing a better energy system with quantitative ...

Downloadable (with restrictions)! The endeavor of this paper is to investigate the feasibility of a solar-assisted ground source heat pump (SAGSHP) system for space heating in the climatic condition of Northern Tunisia. Therefore, an experimental set-up was installed and tested in the Research and Technology Center of Energy. The SAGSHP system consists of a ground ...

FRIEDRICH-EBERT-STIFTUNG - SUSTAINABLE TRANSFORMATION OF TUNISIA'S ENERGY SYSTEM 2.1 THE ORIGINAL PHASE MODELS T 1 The phase model for energy transitions towards renewables-based low-carbon energy systems in the MENA countries was developed by Fischeidick et al. (2020). It builds on the phase models for the German energy system transfor-

The first part of the study involves the sizing and ranking of a set of energy systems using simulation by HOMER software and multi-criteria analysis by the F-AHP-PROMETHEE approach. The second part of the study focuses on developing a mathematical model to optimize water production and using the energy system in the desalination plant.

1 ??· This paper proposes a multi-time scale optimization scheduling method for an IES with hybrid energy storage under wind and solar uncertainties. Firstly, the proposed system ...

For this purpose, a combination of a geographic information system (GIS) and the multi-criterion decision-making (MCDM) method is used for this aim. Various factors are taken into consideration, namely climate conditions, environment, water resources and location. ... Terrapon-Pfaf J. Sustainable transformation of Tunisia's energy system ...

Rekik S, El Alimi S (2024b) Prioritizing sustainable renewable energy systems in Tunisia: An integrated approach using hybrid multi-criteria decision analysis. *Energy Exploration & Exploitation* 42(3): 1047-1076.

Energy Systems. Optimization, Modeling, Simulation, and Economic Aspects ... Fractional-order model reference adaptive control of a multi-source renewable energy system with coupled DC/DC converters power compensation ... 355 Short-term electric load forecasting in Tunisia using artificial neural networks. Rim Houimli; Mourad Zmami; Ousama Ben ...

Multi energy systems are inherently complex and structured systems. The intermittency of renewable sources, the technical constraints of the components, the dynamic variation of energy prices and energy loads are only some of the elements that make their management a difficult task. As a consequence, optimization tools for the evaluation of ...

2017. The objective of this work is to propose an optimization model to determine which configuration of Renewable Energy Systems (RES) is suitable (Wind Turbine - Battery, Panel photovoltaic - Battery or Wind Turbine - Panel photovoltaic - Battery) to power remote areas autonomously with well- defined levels of reliability and the most optimal economic costs.

(3)????????????????,????????????,????????????????????????????????,????????????????????????????,????????,??,??????????

MES (multi-energy systems) whereby electricity, heat, cooling, fuels, transport, and so on optimally interact with each other at various levels (for instance, within a district, city or region) represent an important opportunity to increase technical, economic and environmental performance relative to "classical" energy systems whose sectors are treated "separately" or ...

?Energy Engineering Department National Engineering School of Monastir, University of Monastir;? - ??Cited by 131?? - ?Renewable Energy Technologies? - ?Solar PV? - ?Wind Energy? - ?Multi-criteria Decision Making? - ?Power Generation?

This study proposed a new approach, based on simulation and multi-criteria decision making to evaluate the best hybrid energy system in desalination plant in Tunisia. The results of the proposed model have determined that system photovoltaic, wind and the national grid is the best energy system in desalination plant.

6th IEEE International Energy Conference, ENERGYCon 2020 - Virtual, Gammarth, Tunis, Tunisia Duration: 28 Sept 2020 -> 1 Oct 2020: Publication series. Name: IEEE International Energy Conference (ENERGYCon) ... Schwaeppe, Henrik et al. / Requirements for integrated planning of multi-energy systems. 2020 6th IEEE International Energy Conference ...

This study explores the techno-economic feasibility of, both off-grid and on-grid, hybrid renewable energy systems for remote rural electrification in Thala City, located in the highest region of Tunisia, using wind and biomass ...

Renewable energy systems have emerged as a viable option to mitigate the environmental impacts of traditional fossil fuels. However, the intermittent nature of these renewables, such as solar and wind, makes it challenging to ensure a stable energy supply using only one type. Therefore, combining more than a single technology offers significant advantages in ...

Tunisia Multi Energy Systems Market is expected to grow during 2023-2029 Tunisia Multi Energy Systems Market (2024-2030) | Growth, Forecast, Share, Value, Competitive Landscape, Analysis, Size & Revenue, Trends, Outlook, Industry, Segmentation, Companies

Prioritizing sustainable renewable energy systems in Tunisia: An integrated approach using hybrid multi-criteria decision analysis ... countries around the world and local governments have been trying to diversify their energy systems in an effort to tackle the challenges of the energy-environment-economy nexus as well as achieve the ...

DOI: 10.1016/j.sal.2024.117358 Corpus ID: 267276648; Optimum design of on-grid PV/wind hybrid system for desalination plant: A case study in Sfax, Tunisia @article{Mallek2024OptimumDO, title={Optimum design of on-grid PV/wind hybrid system for desalination plant: A case study in Sfax, Tunisia}, author={Marwa Mallek and Mohamed Ali ...

The urgency of climate change concerns emphasizes the significance of a worldwide transition to low-carbon development characterized by reduced fossil fuel consumption and greenhouse gas emissions [1] recent years, the widespread integration of renewable energy sources into power systems has emerged as a crucial approach for realizing ...

Due to their small dimension and isolated energy systems, islands face a significant energy supply challenge. In general, they use fossil fuels for electricity generation. Fossil fuels are a major source of CO₂ emissions, and they are very costly. The cost of electricity generation on islands is up to 10 times higher than on the mainland. This situation without a ...

Hence, the prime objective of this article is to conduct a thoughtful assessment of four prominent renewable energy options for electricity generation and explore the most potential barriers ...

The conference will take place in Djerba, Tunisia from October 31 to November 03, 2024. ... EMMS: Energy Management in Multi source Systems; FCHEV: Fuel Cell and Hybrid Electrical Vehicle; EHES: Energy Harvesting & Embedded Systems; MD: Monitoring and Diagnosis; GREEN PROCESS.

Design of fault monitoring framework for multi-energy systems using Signed Directed Graph * *This work was supported by the Ministry of the Higher Education and Scientific Research in Tunisia.

FRIEDRICH-EBERT-STIFTUNG - SUSTAINABLE TRANSFORMATION OF TUNISIA'S ENERGY

SYSTEM 2.1 THE ORIGINAL PHASE MODELS¹ The phase model for energy transitions towards renewable-based low-carbon energy systems in the MENA countries was developed by Fischeidick et al. (2020). It builds on the phase models for the German energy system transfor-

In this study, the sizing of on-grid and off-grid renewable energy systems is conducted using the multi-objective optimization model proposed in Section 4.5. The simulations are performed for two EVCS points located in the provinces of Istanbul (with high traffic density) and Tekirdag (with low traffic density) in Turkey.
