The larger the C-rate number of a li polymer battery, the higher the rate of the li polymer battery. For example, for a 3000mAh battery, 0.2C means 600mA (0.2 times of 3000mAh), and 1C means 3000mA (1 times of 3000mAh). And the 3000mAh li polymer battery with a rated rate of 1C means that its discharge speed should not exceed 3000mA (3A).

Because it is wrapped, a total of only 0.2mm thickness is added to the base of the battery. The installation of the battery does not require an additional frame structure, as long as the aluminum-plastic film is fixed with double-sided tape. And if you switch to a removable battery, the phone's battery will be much thicker.

This standard is mainly for the safety requirements of a single battery and battery packs and portable sealed only sell batteries and battery packs containing alkaline or non-acid electrolytes (including lithium-ion polymer batteries, lithium-ion(Li-Ion) cells, nickel-hydrogen batteries, nickel-cadmium batteries, etc.).
