

Net zero energy building Isle of Man

Will the Isle of Man be net zero by 2050?

A detailed plan that demonstrates the Isle of Man's commitment to tackle climate change has been published. The Climate Change Plan 2022-2027 outlines the actions Government must take to cut emissions over the next five years, so the Island remains on track to be net zero by 2050.

What is net zero energy building?

Net zero energy building is most commonly associated with commercial buildings, but it is possible for any structure to be net zero, including residential homes, as the concept is applicable and scalable to virtually any sized structure, whether a building is an expansive multi-use facility or a tiny home.

What's new in the Isle of MAN Energy Strategy?

The document details progress made over the past 12 months, with key areas including: Clare Barber MHK, Minister for Environment, Food and Agriculture, said: "The updated Energy Strategy reaffirms our commitment to building a sustainable, secure, and affordable energy future for people in the Isle of Man."

The Isle of Man is taking its next step towards net zero with a ban on fossil fuel heating in new buildings from 2025. Plans for new buildings and extensions in the Isle of Man will be "required to feature low-carbon heating systems" from January 1, 2024.

A plan outlining ways to reduce the island's carbon emissions to net-zero by 2050 is published. ... more renewable energy sources are among the Isle of Man's updated plans to tackle climate change ...

Natural environments play an important role in the global greenhouse gas cycle through the removal and storage of greenhouse gases from the atmosphere. The Isle of Man Government has recognised that to reach net zero greenhouse gas emissions by 2050, a long-term programme of land use management for carbon sequestration will be required.

Today, the Isle of Man is committed to statutory net zero targets for 2030 and 2045 and a five-year Climate Change Plan. In March 2023, the Paris Agreement was formally extended to the Island. In order to reach net zero emissions by 2050, the Isle of Man needs to significantly reduce the amount of greenhouse gases it currently produces.

With the Climate Change Act 2021, the Isle of Man has committed to net zero emissions of greenhouse gases by 2050. This represents the greatest transformation Manx society has ever experienced, impacting power ...
