

The SATEC PM180 is more than just a power meter--it is a comprehensive solution designed for the smart grid. It integrates IEC 61850 functionality, Fast Transient Monitoring, Bay Controller functionality, and Phasor Measurement Unit (PMU) options, making it an all-encompassing device for power quality analysis and substation automation.

IEC 61850 assures backward and forward compatibility and solution flexibility and durability by enforcing those defined methods co-exist with other methods not defined by IEC 61850 including hardwiring field contacts, nonproprietary distributed network protocol (DNP), and proprietary MIRRORING Bits Communications.

As substation equipment becomes smarter, data will proliferate. This immense amount of data needs to integrate into a future grand scheme that incorporates IEC 61850 inside the station, IEC 61968 for the distribution system, IEC 61970 for the transmission system, IEC 60870-6 between control centers, all operating within the context of the cybersecurity standard ...

Retrofitting existing electrical grids with IEC 61850 smart grid technology is a cost-effective and practical alternative to implementing a smart power grid without rebuilding the entire network from scratch.

It allows utilities to deploy smart grid applications everywhere. Essentially, it is now IEC 61850 everywhere! Read more news from Nokia. Harnessing IEC 61850 everywhere makes it challenging to develop a network blueprint. Many use cases involve multiple domains - substation buses, wide area network (WAN) and field area network (FAN).
