

How is energy sourced in Paraguay?

Energy in Paraguay is primarily sourced from hydropower, with pivotal projects like the Itaipu Dam, one of the world's largest hydroelectric facilities. This reliance underscores the need for a robust infrastructure, including efficient transmission networks and distribution systems, to leverage the country's renewable resources fully.

Does Paraguay need zero-emissions decarbonization?

Source: Prepared by the authors using LEAP. To highlight the policies necessary for zero-emissions decarbonization of energy-use sectors in Paraguay, this re-port introduces three scenarios for Paraguay's final energy demand matrix from 2018 to 2030, 2040, and 2050 based on the freely available LEAP software and available base-line data as of 2018.

Does Paraguay have electricity?

Paraguay's state-owned utility, Administracion Nacional de Electricidad (ANDE), controls the country's entire electricity market, including generation, distribution and transmission. It operates a single hydroelectric dam, Acaray, and six thermal power plants, with total installed capacity of 220 megawatts (MW).

Is biomass a source of electricity in Paraguay?

Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important source in lower-income settings. Paraguay: How much of the country's electricity comes from nuclear power? Nuclear power - alongside renewables - is a low-carbon source of electricity.

Should Paraguay adopt a back-casting approach?

Finally, the Government of Paraguay should adopt a back-casting approach, starting from the end goal--a zero-carbon energy system as of 2050 at the latest--and work backwards to understand what needs to be done in the short and mid-term. This approach does not imply that policies will stay unchanged and fixed for decades.

Does Paraguay export electricity?

The country has become a significant net exporter of electricity, exporting 53.5% of its total production in the same year, which represents a 54% increase in electricity exports over the same period. Per capita, the electricity consumption in Paraguay was 2.086 MWh in 2021, showing a substantial increase of 127% since 2000.
