Can solar energy replace fossil fuels on Pitcairn Island?

Pitcairn's authorities have launched a renewable energy project designed to replace fossil fuels with solar energy. The goal is to replace 95% of the current diesel consumption on Pitcairn Island (75,000 liters per year) with a combination of energy saving and solar electricity through the installation of a hybrid photovoltaic solar energy system.

Are the Pitcairn Islands Green?

Pitcairn Islands, a group of five islands with a total area of 47 km<sup>2</sup> and which constitute one of the most remote archipelagos in the world, turn to safer, greener energies that best meet the needs of the population. Pitcairn's authorities have launched a renewable energy project designed to replace fossil fuels with solar energy.

How many islands are in the Pitcairn Islands?

The Pitcairn Islands form the southeasternmost extension of the geological archipelago of the Tuamotus of French Polynesia, and consist of four islands: Pitcairn Island, Oeno Island (atoll with five islets, one of which is Sandy Island), Henderson Island and Ducie Island (atoll with four islets).

Is Pitcairn Island dead?

Pitcairn Island lay dead ahead, but only when the sun rose into a more benign position could we discern its ragged profile. "The perfect island on which to seek refuge," said one of the guides on the Aranui 5, a combined freight and passenger ship that connects Polynesian islands.

How do I get to Pitcairn?

Getting there: with no airstrip, the easiest way to visit Pitcairn is on the Aranui (aranui.com) or a handful of other cruise ships that make occasional visits, or via the island's supply ship, the Silver Supporter.

Why is Pitcairn a unique place?

Shortly after they made it ashore, the Bounty was set alight by one of the mutineers, turning Pitcairn into a prison island for the settlers. For better and worse, today it is a singular place, not just unique, but actively unlike anywhere else on Earth.
