

Is Lithuania a net energy importer?

Lithuania is a net energy importer. In 2019 Lithuania used around 11.4 TWh of electricity after producing just 3.6 TWh. Systematic diversification of energy imports and resources is Lithuania's key energy strategy. Long-term aims were defined in the National Energy Independence strategy in 2012 by Lietuvos Seimas.

Which natural gas companies are in Lithuania?

Natural gas companies in Lithuania include Lietuvos Dujos and Ignitis. In 2021 Lithuania used coal to generate 2% of the country's electricity. Renewable energy includes wind, solar, biomass and geothermal energy sources.

Will Lithuania switch from fossil fuels to electricity?

Lithuania would switch from fossil fuels to electricity from renewable energy sources (RES), generate electricity for domestic needs, to produce hydrogen, and export not only energy, but also higher-value sustainable products.

Does Lithuania import electricity?

Since then, the shares of electricity imports, natural gas and bioenergy have increased. Today, Lithuania imports over 70% of its electricity needs, while bioenergy is taking the lead in domestic energy supply.

Why is Lithuania investing in alternative energy import routes?

This is because ever since the reestablishment of its independence, Lithuania has been investing in alternative energy import routes. These included the development of the B?ting? oil terminal, the electricity interconnections NordBalt and LitPol Link, the Klaip?da LNG terminal and the Gas Interconnection Poland-Lithuania.

Should Lithuania produce electricity by 2030?

By 2030, Lithuania should not only produce electricity for domestic use, but also create the conditions for the development of a hydrogen industry and the export of residual energy.
