

Is there a cost-effective microgrid system for Saudi Arabia's Yanbu city?

This article aimed to construct a cost-effective microgrid system for Saudi Arabia's Yanbu city using five configurations using excess energy to generate hydrogen.

What is the world's largest microgrid?

The Red Sea Project, a key part of Saudi Vision 2030, is now the world's largest microgrid with 1.3GWh storage capacity. Huawei Saudi Arabia's Red Sea Project is making headlines with the construction of the world's largest photovoltaic-energy storage microgrid.

Is Saudi Arabia ready for a smart grid?

The abundance of renewable energy sources, especially solar PV has motivated the Saudi Arabian utility and legislation to harvest renewable energy sources. Therefore, a meticulous and accelerated roadmap for the realization of smart grid has been established.

Does Saudi Arabia need a modernized power grid?

Similar to the numerous challenges encountered globally in the process of smart grid transformation, the traditional power grid in Saudi Arabia faces challenges such as transmission losses, low efficiency, and limited ability to accommodate RESs. Therefore, there is a need for a modernized power grid.

Are hybrid microgrids necessary for rural electrification?

Hybrid microgrid systems (HMGs) have become critical for rural electrification. Numerous studies (e.g., [9,10,11,12,13,14,15,16]) have investigated and proposed a hybrid renewable energy system (HRES). These studies provide all the required information for designing isolated HRESs.

Are hybrid microgrids sustainable?

As a result, a parallel path to sustainability must be developed that uses both renewable and clean carbon-based methods. Hybrid microgrids are promoted to solve various electrical and energy-related issues that incorporate renewable energy sources such as photovoltaics, wind, diesel generation, or a combination of these sources.
