

Is Spain a good country for renewables?

Spain has been one of the long-time leaders in the European renewables sector, making substantial investments in solar and wind capacity over the last 10 years. In particular, the country was an early adopter of onshore wind technology that now accounts for more than 20% of Spain's power generation.

Will Spain achieve a cleaner energy future?

Spain's renewable energy achievements come as no surprise given its history of strategic investments and early adoption. Its progress should be a clear benchmark for counterparts and serve as testament to the attainability of a cleaner energy future. Fabian Ronningen, senior renewables and power analyst, Rystad Energy.

What percentage of Spain's electricity is renewable?

By 2019, wind and solar energy made up 21% and 6% of total electricity generation, respectively. The installation of photovoltaic (PV) plants beginning in 2007 played a key role in this increase, doubling the renewables' share in Spain's electricity mix from 20% in 2008 to 40% in 2013.

Will Spain raise its share of renewables by 2030?

According to a draft government report issued in June, Spain's goal is to raise the share of renewables to four-fifths by 2030. The new climate plan includes higher targets for solar and wind power capacity as well as energy storage.

How did renewables affect Spain's electricity mix?

The installation of photovoltaic (PV) plants beginning in 2007 played a key role in this increase, doubling the renewables' share in Spain's electricity mix from 20% in 2008 to 40% in 2013. After this period of growth, the share of renewables in Spain's electricity generation leveled off, reaching 37% by 2019.

How many MW of New Renewable licenses are there in Spain?

Last Tuesday, Spain's government held the long-awaited auction of 3,034 MW of new renewable licenses with a high level of participation. A total of 84 companies made bids, reaching 9,700 MW, which is three times the power offered. The megawatts allocated were distributed amongst 32 business groups.

Spain continues to generate more electricity from renewable sources as its renewable share of electricity rose to 50.8 percent in 2023 from 42.2 percent in 2022. According to a draft government report issued in June, Spain's goal is to raise the share of renewables to four-fifths by 2030. The new climate plan includes higher targets for solar and wind power ...

The plant will deliver clean electricity to meet the needs of approximately 30,000 families across Spain and avoid emissions of over 44,000 tons CO₂-eq. . October 5, 2022, MADRID, Spain - Matrix Renewables, the

TPG Rise-backed renewable energy platform, today announced the launch of its Olivares Solar Plant's commercial operations.. The Olivares PV ...

"With this operation, the EIB continues to accelerate the energy transition in Spain by increasing renewable energy generation capacity. ...
