Could a new solar project help remote Arctic communities transition to green energy?

Norway has installed the world's northernmost ground solar panels in its Svalbard archipelago, a region plunged in round-the-clock darkness all winter. The pilot project could help remote Arctic communities transition to green energy.

How polar climate affect bifacial solar power production?

The Polar climate have severable favourable characteristics for solar power production, namely the effect of increased solar cell voltage with decreasing temperature, and high-albedo providing significant amounts of ground-reflected irradiance which can be utilized by bifacial solar panels (Frimannslund et al., 2021).

Do snowdrifts affect solar power plants in polar climates?

In this study we show that snowdrifts pose a significant challenge for solar power plants in Polar climates as they can grow to cover the plant, resulting in reduced power production and an imposed mechanical load on the PV arrays.

Utility costs can be challenging for homes and businesses, so many find that getting a 20 kW solar system can be advantageous, depending on individual usage and current expenses. Hence, over 25 years, such a system can save approximately $\$78,634.25$ [1], presupposing the current grid electricity cost is $\$0.245/\text{kWh}$ as of October 2024.
