What is Solar Energy? We know solar energy as a source of light and heat. Solar radiation is radiant energy emitted by the sun in the form of electromagnetic waves. The sun emits a vast amount of solar energy, but once that energy begins to travel through the Earth"s atmosphere, the solar rays are absorbed by ozone,

TotalEnergies is committed to developing solar energy with a programme aimed at equipping 5,000 service stations around the world with solar panels, including nearly 2345 in Africa. In Tanzania, TotalEnergies is taking part in this programme, which is enabling equipped stations to cover part of their energy needs.

Consequently, energy production is reduced and reliability suffers at night or during long periods of poor weather. Solar storage systems offer a solution to this issue. These systems are connected to solar panels and allow them to store surplus solar energy for future use. Different storage systems offer advantages in different scenarios.
