The Dutch government is currently working on the National Plan Energy System (NPE). This program will guide what the Dutch energy system should look like in 2050 to become climate-neutral. The energy system of the future will be completely different in many ways, including how energy is generated, used, transported, and stored.

The National Energy System Plan In the NPE, the government gives its vision of the energy system of 2050. It is an extensive document with several appendices, the gist of which is: a CO2-free energy system requires major investments from companies, active government guidance and sharp political choices about the use of scarce energy and space.
