

Are small island energy companies able to develop storage systems?

Small island energy companies do not typically have the research or engineering capability to internally assess the viability of storage projects. Small island power companies find it difficult to raise the required finance for implementation of storage systems. Project costs here can be very significant relative to the scale of the system.

Could distributed energy resources boost the deployment of renewables on islands?

Distributed energy resources - or small-scale energy resources that are usually situated near sites of electricity use, such as rooftop solar - could play an important role in boosting the deployment of renewables on islands, increasing the security, resilience and affordability of power systems while accelerating decarbonisation.

Do IEA islands need resilient power systems?

Islands need resilient power systems more than ever. Clean energy can deliver - Analysis - IEA Islands need resilient power systems more than ever.

Why do small islands need a new energy infrastructure?

Islands - including those that make up the group known as Small Island Developing States (SIDS) - also need to upgrade their energy infrastructure so that it is resilient to higher temperatures, more frequent natural disasters and flooding related to rising sea levels.

Can solar panels help reduce wind lulls in Samoa?

Both solutions could be installed to improve resilience, e.g. the 550 kW Wind Turbine (2 x 275 kW) site below in Samoa could easily have Solar PV panels installed on the same site to help provide electrical power in cases of wind lulls.

How will US staff reductions affect the island's economy & energy consumption?

Notably, as of 2014, the US has begun a major staff reduction on the base, which is likely to have a strong negative impact on the local economy and energy consumption. The island is characterised by its heavy reliance on oil-fired internal combustion engines.
