Our next-gen concentrated solar power (CSP) plants capture the sun's energy at a higher temperature (970C) than regular CSP and store it in simple ceramic pellets.

Working of Solar Power Plant. As sunlight falls over a solar cells, a large number of photons strike the p-type region of silicon. Electron and hole pair will get separated after absorbing the energy of photon. The electron travels from p-type region to n-type region due to the action of electric field at p-n junction. Further the diode is ...
